Vopak

Vopak Ethanol Hub - Rotterdam

Vopak offers the growing global ethanol trade a centrally located European logistics hub in Rotterdam. Our Rotterdam terminals are conveniently located on the main trade lanes of the main parcel tanker operators, carrying Central and South American, African or Asian ethanol to Europe. Rotterdam offers excellent connections to the European hinterland, Scandinavia and UK due to the abundant short sea and inland barging transportation options.

For distribution by truck and rail tank car, Rotterdam is truly the "gateway to Europe".

Our dedicated ethanol infrastructure and highly experienced staff offers a high degree of flexibility and reliability. Vopak terminals in Rotterdam have become the hub location of choice for Europe's leading ethanol traders, producers and consumers.

Dedicated infrastructure

Today, Vopak has allocated significant tank capacity to store and handle ethanol, making Vopak the largest independent ethanol storage facility in the world!

In order to guarantee a highly efficient and reliable handling of the various grades of ethanol, Vopak can offer dedicated tanks and infrastructure for loading and discharging vessels, barges, rail tank cars and trucks.

Ethanol grades

From raw fermentation ethanol to food and pharmaceutical grade ethanol, each grade is handled with the specific care it requires.

Our early investments in a dedicated anhydrous ethanol system have already resulted today in a leading role in fuel ethanol logistics.

Peace of mind

Our long-standing operational experience in the ethanol market has resulted in both highly specialized infrastructure and in highly experienced staff. For our customers, this results in smooth operational execution. Moreover it offers our customers the benefits of excellent know-how with respect to customs and duties.
